

System 9 - The principle

1. Select the space and type of installation for the basePlate.
2. Place the mobile phone specific or universal cradle in the basePlate.
3. Make phone calls with optimum reception and full batteries.

Add-on unit for Bluetooth hands-free car kits
The System 9 is "the" extension for Bluetooth hands-free car kits, which do not independently support the use of an external antenna or the charging function of the mobile phone battery. The components of the System 9 are designed for Bluetooth hands-free car kits of all manufacturers.

The hang-up cup basePlate and the holder activeCradle are the two main parts of this system. Thanks to our patented snap-in mounting, the two of them can be quickly connected.

In the same way one can insert the mobile phone into the activeCradle. activeCradles allow a comfortable and secure placement of mobile phones and provide unlimited talk time thanks to the integrated battery charging technology. By using the external antenna with the basePlate, the sending and reception quality can be noticeably improved while driving.
