Important note:

It is not necessary to install every new software available on our website. If your mobile phone is working properly with a device from our Comfort VISION car kit range, it is advisable to continue using that software. Please take into consideration, that each new software version may not contain new functions, in most cases these are simply supplements to give compatibility with different/new mobile phones.

How do I update the CV operating system? The most important steps are as follows:

1. You will need: a laptop, a Bluetooth stick (which you will connect to the laptop), Bluetooth administration software, the Comfort VISION (CV) Update Manager and the latest CV software version.
2. You will find the CV software and the Bluetooth administration software BlueSoleil on our homepage / Comfort VISION. Please download the CV Update Manager and the latest CV software.
3. Switch on the Comfort VISION and ensure that the power supply is not interrupted while updating the system*. Please note, the software update is only complete when the CV switches off automatically.
4. If you use BlueSoleil: Open the programme, search for Bluetooth devices in the menu "My Bluetooth" / "Bluetooth Device Discovery". The Comfort VISION symbol appears on the monitor. (Procedure may vary with other Bluetooth software).
5. Open the CV Update Manager, press the button "Open File" and select the new software, which you previously downloaded from our website.
6. Initiate the update process using the CV: Choose "Update" in the "Bluetooth" menu, but do not continue until the CV display reads "Please wait".
7. To connect the CV to the laptop, doubleclick (left mouse button) on the symbol for CV in the BlueSoleil software. Enter the PIN code 1234 in the window opened (on the laptop) for acknowledgement.
8. Click on the CV symbol again (right mouse button), then click "Connect" and "Serial Bluetooth Interface".
9. On the laptop you will see the COM port assigned to the CV selected by the programme. Select this COM port under "Change port" in the CV Update Manager.
10. Click on "Yes" to confirm that you want to establish a connection (in the BlueSoleil software). You will now see a 'ray' between the symbol of the CV and the sun on the laptop. The CV displays "Connected".
11. Finally click on "Send" in the CV Update Manager and have the update run. When the update is finished, the CV device will turn off automatically.

* Warning: It is essential that the power supply is not interrupted during the software updating process. This could damage the CV unit, preventing a further software update being carried out. The software update is only complete when the CV switches off automatically.

The manufacturer cannot be held responsible for any malfunction to the unit caused by an incorrect software update procedure.

Subject to change. Errors and omissions excepted.
